IDLE REDUCTION PROGRAM

Eaton's Trucking Service Inc. and Quality Carriers, Inc., Florence, VT and Johnstown, NY will voluntarily start an Idle Reduction program. Effective June 1, 2011 all drivers will shut the engines in their trucks down when they come to a delivery point or stop for a lunch break. Overnight idling will only be permitted when temperatures are above 75°F or below 40°F unless the truck is equipped with an APU unit or a bunk heater. We ask all drivers to comply with this new program.

Through the summer months we will be installing bunk heaters in the tractors. We also ask all drivers to use the IdleAir program wherever available. You can use your Comdata Card to pay for IdleAir service at participating truck stops.

We can all benefit from this program.
